In March 2014, the average time from submission to first decision for all original research papers submitted to Circulation Research was 12.63 days.

On the Cover: 3D rendering of a confocal Z-stack of a mouse retina, showing endothelial cells in green and nuclei in blue. Red color depicts volume rendering of phospho-histone H3-stained nuclei of proliferating cells. The long noncoding RNA MALAT1 is required for endothelial cell proliferation. See related article, page 1389.
