Letter by Rask-Madsen et al Regarding Article, “Selective Enhancement of Insulin Sensitivity in the Endothelium In Vivo Reveals a Novel Proatherosclerotic Signaling Loop”

Christian Rask-Madsen, Kyoungmin Park, Qian Li, George L. King

Response by Viswambharan and Kearney to Letter Regarding Article, “Selective Enhancement of Insulin Sensitivity in the Endothelium In Vivo Reveals a Novel Proatherosclerotic Signaling Loop”

Hema Viswambharan, Mark T. Kearney

Correction

Correction to: miR-143 Activation Regulates Smooth Muscle and Endothelial Cell Crosstalk in Pulmonary Arterial Hypertension

In December 2016, the average time from submission to first decision for all original research papers submitted to Circulation Research was 13.4 days.

On the Cover: Composite of brightfield and fluorescent images of a human cardiac fibroblast treated with exosomes isolated from human pediatric cardiac progenitor cells. Exosomes (stained with Acridine Orange; red) can be seen in the cytoplasm of the cell. The nucleus was stained with DAPI (blue). See related article, page 701.
