CIRCULATION RESEARCH (ISSN 0009-7330 print / 1524-4571 online) is published semimonthly for 24 total issues a year by Wolters Kluwer Health, Inc. at 14700 Citicorp Drive, Bldg 3, Hagerstown, MD 21742. Business offices are located at Two Commerce Square, 2001 Market Street, Philadelphia, PA 19103. Production offices are located at 351 West Camden Street, Baltimore, MD 21201-2436. AHA members will have online access to the journal as a benefit of membership. In the US, individuals may subscribe in print for their personal use at the annual rate of $749 for nonmembers. International: $888 for nonmembers. AHA membership information can be found online at professional.heart.org. Periodicals postage paid at Hagerstown, MD, and additional mailing offices. POSTMASTER: Send address changes to Circulation Research, American Heart Association, Wolters Kluwer Health, Inc., PO Box 1550, Hagerstown, MD 21740.
MPO Promotes Arrhythmogenic Ventricular Remodeling
Mollenhauer et al. page 56

Clinical Relevance and Role of Neuronal AT1 Receptors in ADAM17-Mediated ACE2 Shedding in Neurogenic Hypertension
Jiaxi Xu, Sririvas Srimulata, Huijing Xia, Lisa Moreno-Walton, Frank Culichia, Oliver Domenig, Marko Poglitsch, Eric Lazartigues page 43

CETP Protein Truncating Variants and Risk for CHD
Nomura et al. page 81

In May 2017, the average time from submission to first decision for all original research papers submitted to Circulation Research was 12.3 days.

On the Cover: The cover image shows an almost confluent carpet of neutrophils in an en face view of the intimal surface of a mouse carotid artery with a neointima tailored to recapitulate features associated with human coronary arterial lesions, in a region of disturbed flow produced by a constrictive adventitial cuff. Note the multilobed nuclei characteristic of polymorphonuclear leukocytes. Green Ly6G+ fluorescence decorates the surface of these granulocytes. The article within provides evidence that such recruited neutrophils promote and amplify intimal injury and endothelial dysfunctions implicated in superficial erosion, a cause of arterial thrombosis poorly understood mechanistically. See related article, page 31.
