Dose Comparison Study of Allogeneic Mesenchymal Stem Cells in Patients With Ischemic Cardiomyopathy (The TRIDENT Study)

**Corrections**

Correction to: Association of Serum Retinoic Acid With Risk of Mortality in Patients With Coronary Artery Disease [Online Only]

Correction to: Association of Plasma 7-Ketocholesterol With Cardiovascular Outcomes and Total Mortality in Patients With Coronary Artery Disease [Online Only]

In September 2017, the average time from submission to first decision for all original research papers submitted to *Circulation Research* was 13 days.

On the Cover: A representative image demonstrating that human mesenchymal stem cells reduce scar size in patients with ischemic cardiomyopathy. See related article, page 1279.
