Letters to the Editor

Letter by El-Battrawy et al Regarding Article, “The Brugada Syndrome Susceptibility Gene HEY2 Modulates Cardiac Transmural Ion Channel Patterning and Electrical Heterogeneity”
Ibrahim El-Battrawy, Siegfried Lang, Martin Borggrefe, Xia-Bo Zhou, Ibrahim Akin

Response by Veerman et al to Letter Regarding Article, “The Brugada Syndrome Susceptibility Gene HEY2 Modulates Cardiac Transmural Ion Channel Patterning and Electrical Heterogeneity”
Christiaan C. Veerman, Ronald Wilders, Arthur A. Wilde, Ruben Coronel, Carol Ann Remme, Arie O. Verkerk, Connie R. Bezzina

Inhibition of Meg3 Prevents Cardiac Remodeling
Piccoli et al, page 575

On the Cover: Volcano plot of HEY2 coexpression analysis in human left ventricular tissue. Genes that are coexpressed with HEY2 in human heart were identified by correlating the abundance of transcripts genome-wide with the abundance of the HEY2 transcript (x-axis, regression coefficient; y-axis, negative log of the P value). The transcript of the KCNIP2 gene, which encodes potassium channel interacting protein 2, was strongly positively correlated with that of HEY2. See related article, page 537.
