CIRCULATION RESEARCH (ISSN 0009-7330 print / 1524-4571 online) is published semimonthly for 24 total issues a year by Wolters Kluwer Health, Inc., at 14700 Citicorp Drive, Bldg 3, Hagerstown, MD 21742. Business offices are located at Two Commerce Square, 2001 Market Street, Philadelphia, PA 19103. Production offices are located at 351 West Camden Street, Baltimore, MD 21201-2436. Individuals may subscribe for their personal use at the following rates for print subscriptions: $225 for AHA/ASA Domestic and International Members (excluding General Membership level), or $790 for domestic non-members and $937 for international non-members. AHA membership information can be found online at professional.heart.org. Periodicals postage paid at Hagerstown, MD, and additional mailing offices. POSTMASTER: Send address changes to Circulation Research, American Heart Association, Wolters Kluwer Health, Inc., PO Box 1610, Hagerstown, MD 21740.

Response by Veerman et al to Letter Regarding Article, “The Brugada Syndrome Susceptibility Gene HEY2 Modulates Cardiac Transmural Ion Channel Patterning and Electrical Heterogeneity”

Christiaan C. Veerman, Ronald Wilders, Arthur A. Wilde, Ruben Coronel, Carol Ann Remme, Arie O. Verkerk, Connie R. Bezzina

In June 2017, the average time from submission to first decision for all original research papers submitted to Circulation Research was 12.45 days.

On the Cover: Volcano plot of HEY2 coexpression analysis in human left ventricular tissue. Genes that are coexpressed with HEY2 in human heart were identified by correlating the abundance of transcripts genome-wide with the abundance of the HEY2 transcript (x-axis, regression coefficient; y-axis, negative log of the P value). The transcript of the KCNIP2 gene, which encodes potassium channel interacting protein 2, was strongly positively correlated with that of HEY2. See related article, page 537.
