Acetylcholine
carbon dioxide and epinephrine circulatory effects and, 573
membrane potential of arterial smooth muscle, 641
testicular blood flow of ram, 755
Actinomycin D, cardiac hypertrophy, failure, and inhibition of protein synthesis, 558
Action potentials
cardiac cells, mature and embryonic, barium ion effects on, 484
myocardial, oxygen cost of, 357
Adenosine triphosphatase, human cardiac myofibrillar, in congestive failure, effects of ouabain and calcium, 534
Adrenal glands, zona glomerulosa in experimental hypertension, purified and heterologous renins, 219
Adrenalectomy, carbon dioxide and epinephrine circulatory effects and, 573
Afterload
contractile state of heart by afterloaded and isovolumic beats, 149
force-velocity relations and contractile element work in the intact dog heart, 729
Aging
arteries; elastic modulus, viscosity, longitudinal retraction, radius, and relative wall thickness, 278
ventricular hypertrophy and coronary artery diameter in lambs and sheep, 634
Allergic encephalomyelitis, experimental, somatic and cardiovascular reflexes in rats, 118
Amyl nitrite, electrical and mechanical effects on vascular smooth muscle, 641
Analog computer, indicator-dilution measurements of variable flow; equations, 26
Analog model, baroreceptor reflex system and arterial blood pressure, 673
Anesthesia
electrophysiological effects on the heart, 140
general, left ventricular volumes in tranquilized dogs, 457
Angiocardiography, ventricular volume, biplane, single plane, comparison with indicator dilution, 248
Angiotensin
arterial blood pressure oscillations, Mayer waves, 525
blood pressure rise and mechanism of protracted response, 705
experimental hypertension
renal; cardiovascular reactivity in, 379
vascular disease, zona glomerulosa effects, 219
vena cava constriction, sodium depletion, and blood pressure, 475
membrane potential of arterial smooth muscle, 641
Aorta
cholesterol uptake and release in rabbits, metabolic inhibitors, 293
congenital anomalies produced by mechanical interference with cardiogenesis, 625
elastic modulus, viscosity, aging, longitudinal retraction, radius, and relative wall thickness, 278
impedance, spectral analysis of, 585
insufficiency measured by indicator dilution, 97
D- and L-thyroxine effects on atherosclerosis and serum cholesterol in cockerels, 519
Aortic insufficiency, measurement by indicator dilution, 97
Arrhythmias. See also Fibrillation
cardiac, respiratory center activity and, 67
chloroform-epinephrine induced, altered heart rate affecting bigeminy and ventricular tachycardia, 316
Arteries
arterioles
histology of segmental lumen occlusion by constriction, 199
resistance changes related to innervation, 429
atherogenesis
margarines and oils compared, 213
D- and L-thyroxine in atherogenesis, 519
blood pressure
baroreceptor reflex system and, 673
carbon dioxide and epinephrine circulatory effects, 573
in experimental allergic encephalomyelitis of rats, 118
norepinephrine effects by prolonged infusion, 596
oscillation frequency and damping, Mayer waves, 525
transfusion and hemorrhage effects over 7 to 10 hours, 190
bronchial, development of collaterals increased by growth hormone, 228
coronary
heterologous renin effects, 219
hyperbaric oxygenation and occlusion of, 89
luminal area increase with ventricular hypertrophy, 634
D- and L-thyroxine in atherosclerosis, 519
elastic modulus, viscosity, aging, longitudinal retraction, radius, and relative wall thickness, 278
electrical and mechanical activity at smooth muscle, 641
femoral
impedance, 126, 278, 585
spectral analysis of impedance, 585
vascular impedance, dilatation, and constriction in dog and sheep, 126
viscosity, age relations, wall thickness, 278
impedance, femoral arteries, 126, 278, 585
lumen occlusion in arterioles during vasocstriction, 199
muscle
oxygen consumption during stretch, 79
smooth; membrane potential of, 641
peripheral, segmental resistance changes related to innervation, 429
pulmonary stenosis; ventricular hypertrophy and coronary lumen area increases, 634
surfactant concentration and pressure-volume curves, 683
spectral analysis of impedance, 585
turbulent blood flow; mathematical model of dye dispersion, 398

Arteriolar histology of segmental lumen occlusion by constriction, 199
resistance changes related to innervation, 429
Asystole, potassium chloride block of subendocardial tissues, 113

Atelectasis, lung circulation in, 366

Atherogenesis margarines and oils compared, 213
D- and L-thyroxine and cholesterol in cockerels, 519
D- and L-thyroxine and cholesterol in rabbits, 525

ATPase, human cardiac myofibrillar, in congestive failure; effects of ouabain and calcium, 534

Atrioventricular automaticity, block or delay of premature responses, 660

Atrium concealed A-V conduction of premature responses, 660
interatrial band (Bachmann’s bundle), 502

Atropine carbon dioxide and epinephrine circulatory effects and, 573
electrophysiological effects on the heart, 140

Automaticity cardiac abolished by KCl block of subendocardial tissues, 113
divalent metallic ions on, 484

Autonomic blockade, transfusion and hemorrhage effects, 190

Autonomic nervous system carbon dioxide and epinephrine effects; blood pressure, heart rate, inotropism, 573
experimental allergic encephalomyelitis in rats, 118

Blood arterial, pH, norepinephrine effects by prolonged infusion, 596
circulation dynamics, 398
cogulation, clot consistency affected by shear rates, 349
erthrocytes, yield stress and fibrinogen effects, 437
oxenesis, norepinephrine effects by prolonged infusion, 596
plasma, cardioactive substance, effects on coronary and limb vessels, 1
red cells, yield stress and fibrinogen effects, 437
thixotropy; blood clots, shear rates, and blood viscosity, 349
viscosity angiotensin effects in normal and nephrectomized rats, 705
arterial walls, relation to age and location, 278
tissue changes during coagulation, 349
fibrinogen effects with and without dialysis, 437

Blood flow acceleration and deceleration, heart sounds and, 303
arrest; turbulent, mathematical model of dye dispersion, 398
brain, regional measurements by intra-arterial Kr85 and Xe133, 237
coronary cardioactive substance of plasma, and myocardial ischemia, ECC, lactate-pyruvate ratio, 178
distribution in skin and muscle, sympathetic stimulation and norepinephrine compared, 263
in femoral arteries, impedance, 126, 278, 585
hemorrhage
-cardiac output and peripheral resistance over 7 to 10 hours, 190
damped blood pressure oscillations, 525
and metabolism in man, 469
subendocardial, produced by prolonged norepinephrine infusion, 605
impedance in femoral arteries, 126, 278, 585
mammary gland, by thermodilution and Fick principle, 745

measurements arterial, mathematical model of dye dispersion, 398
-brain; regional measurements with Kr85 and Xe133, 237
-indicator-dilution, variable, 26
-with Kr85, 237, 650, 755
-mammary gland, by thermodilution and Fick principle, 745
-pulmonary, in unilateral hypoxia, by scan, 550
-by scan, 550
-skin, with Kr85 and Xe133, 237
-testicular, with Kr85, 755
-by thermodilution, 26, 745
-with Xe133, 237
-peripheral, cardioactive substance of plasma and, 1
-pulmonary, regional change in unilateral hypoxia, by scan, 550
-skin
-with Kr85 clearance, two-compartment model; effect of hair growth and temperature, histological correlation, 650
-segmental effects of sympathetic stimulation and norepinephrine, 263
-splanchnic, metabolism and hemorrhage in man, 469
testicular, measured with Kr85, 755
-variable indicator-dilution measurements of, 26

Circulation Research, Vol. XVIII, June 1966
Blood pressure
angiotensin effects in normal and nephrectomized rats, 705
aortic, frequency components of pressure waves, 303
arterial
baroreceptor reflex system and, 673
carbon dioxide and epinephrine circulatory effects and, 573
in experimental allergic encephalomyelitis of rats, 118
norepinephrine effects by prolonged infusion, 596
oscillation frequency and damping, Mayer waves, 525
transfusion and hemorrhage effects over 7 to 10 hours, 190
hypertension
heterologous renin, vascular disease, zona glomerulosa, 219
renal, 379, 475
renin, 219, 475
retarding substances and renin effects, 219
vascular reactivity in, 379
regulation by baroreceptor reflex, 673
ventricular
frequency components of pressure waves, 303
right, end-diastolic, transfusion and hemorrhage effects, 190
Blood vessels
collateral, increased in lung by growth hormone, 228
coronary, effects of cardioactive plasma substance, 1
electrical and mechanical activity at smooth muscle, 641
extremities, effects of cardioactive plasma substance, 1
reactivity in renal hypertension, 379
vasoconstrictor activity inhibited peripherally, 714
Blood volume
central, transfusion and hemorrhage effects over 7 to 10 hours, 190
norepinephrine effects by prolonged infusion, 596
Books received, 766
Bradykinin, membrane potential of arterial smooth muscle, 641
Brain, regional blood flow measurements by Kr85 and Xe133, 237
Bretylium, cardiac sympathetic blockade and effects of baroreceptors, 101
C
Calcium
cardiac myofibrillar ATPase activity in congestive failure, ouabain and, 534
gastrointestinal effects, cardiac muscle contraction, 492
myocardial K+ exchange and contraction frequency, 164
Carbon dioxide, epinephrine responsiveness; blood pressure, heart rate, and inotropism, 573
Cardiac catheterization, aortic and mitral regurgitation measured together by indicator dilution, 97
Cardiac disease, aortic and mitral incompetence measured by indicator dilution, 97
Cardiac failure
acute, myocardial tension and contraction velocity, 149
congestive
myocardial ATPase activity, ouabain and calcium effects, 534

INDEX
produced by prolonged, graded norepinephrine infusions, 605
hypertrophy and inhibition of protein synthesis, 558
norepinephrine producing by prolonged infusion, 596, 605

INDEX

Conduction
atrial, specialized via Bachmann's bundle (intratricular band), 502
barium effects on, 484
concealed, A-V delay and block of premature responses, 669
endocardial, asystole produced by intraventricular KCl, 113
isoproterenol and ß-blockade effects on the heart, 140
refractoriness of ventricle during hypothermia, 333
velocity, in intratricular band (Bachmann's bundle), 502
Congenital heart defects, in chick embryos, 257, 625
low incubator temperature and, 257
produced by mechanical interference, 625
Congestive heart failure
myocardial ATPase activity in, effects of ouabain and calcium, 534
produced by prolonged, graded infusions of norepinephrine, 605
contractility
afterload effect on contractile element work in the intact dog heart, 729
epinephrine effects on cardiac muscle contraction, 492
in heart cells, barium effects, 484
myocardial baroreceptors, bretylium, atropine, and vagal blockade, 101
KCl block of subendocardial tissues, 113
potentiation by premature activations, 330
respiratory center activity and, 67
tension and velocity, 149
potassium exchange and contraction frequency, 164
ventricular
afterload effect on contractile element work and force-velocity relations, 729
respiratory center activity and, 67
Control systems
arterial blood pressure, multiple loops and gain, 525
biological analysis of, 673
Coronary artery
heterologous renin effects, 219
luminal area increase with ventricular hypertrophy, 634
occlusion, hyperbaric oxygenation effects, 89
ß and L-thyroxine effects in atherogenesis; serum cholesterol, 519
Coronary circulation
cardioactive substance of plasma and, 1
myocardial ischemia, ECG, lactate-pyruvate ratio, 178
Corotidone, effects on growth of arterial collateral vessels in lung, 228
Culture, heart cells, rhythmicity and contractility affected by barium, 484
Cyclopropane, membrane potentials of atrial, ventricular, and Purkinje fibers, 692
Cystine, deficiency of and cholesterol metabolism, 205
D
Defibrillation, optimal impulse parameters for, 10
Diet
atherogenic, ß- and L-thyroxine in cockerels, 519
fats in hypercholesterolemia and atherogenesis, 213
Dilatation. See Vaso dilatation
Disturbed flow, 398, 447. See also Flow
Double outlet syndrome, experimental congenital lesions in chick embryos, 625
Dye dilution. See also Indicator dilution
tests in schema, 26
Elastic modulus, arteries, changes with age; pressure and radius, 278
Electrical activity
myocardial, oxygen cost of, 357
responses of vascular smooth muscle to vasodilator drugs, 641
Electrocardiogram
ischemia of myocardium; oxygen consumption and excess lactate, 178
isoproterenol and ß-blockade effects on heart rate, rhythm, and conduction, 140
sympathetic innervation of ventricles affecting, 416
Electron microscopy, myocardial sarcomere structures and lengths related to pressure and volume, 49
Embryology, congenital cardiac anomalies induced in chicks, 257, 625
by low incubator temperature, 257
by mechanical interference, 625
Encephalomyelitis, allergic, experimental, somatic and cardiovascular reflexes in rats, 118
Endocardium
conduction, asystole produced by KCl block, 113
subendocardial hemorrhage produced by prolonged norepinephrine infusions, 605
Endothelium, arteriolar, histological appearance in constriction, 199
Enzymes
hibitors, cholesterol uptake and release in rabbit atheroma, 293
isoenzymes, lactic dehydrogenase, released by prolonged norepinephrine infusion, 616
Epinephrine
arterial blood pressure oscillations, Mayer waves, 525
carbon dioxide effect on blood pressure, heart rate, inotropism, 573
chloroform-induced cardiac arrhythmia and, 316
excitation-contraction coupling in cardiac muscle, 492
histological evidence of lumen occlusion in arterioles, 199
inotropism, 492, 573
testicular blood flow of ram, 755
vasoactive reactivity in renal hypertension, 379
Equations, thermodilution variable flow measurements, tests in schema, 26
Erythrocytes, yield stress, fibrinogen effects, 437
Excitation-contraction coupling, epinephrine effects in cardiac muscle, 492
Extrasystoles, myocardial tension and contraction velocity, 149
F
Fats, dietary, atherogenic and hypercholesterolemic effects of, 213
Femoral artery
dilatation, constriction, and vascular impedance in dog and sheep, 126
impedance, 126, 278, 585
spectral analysis of impedance, 585
viscosity, age relations, wall thickness, 278
Fibrillation
defibrillation, optimal impulse parameters for, 10
threshold of premature beats, 18

Circulation Research, Vol. XVIII, June 1966
Fibrinogen, blood viscosity influenced by addition of, 437
Fick principle, mammary gland blood flow, compared with thermodilution method, 745
Filling pressure, relation to myocardial sarcomere length, 49
Filtration theory, in rabbit aorta, 293
Flow. See also Blood flow
  disturbed, in vessels; dye dispersion, mathematical model, 398
  patterns; laminar, turbulent, disturbed; birefringence study method, 447
  pulsatile
    impedance in femoral arteries; dilatation and constriction, 126
  power spectrum and pressure, 447
Fluid flow, dye dispersion, mathematical model, 398
Force-velocity relations
  afterload, contractile element work, in the intact dog heart, 729
  and the contractile state of the heart, 149
Frequency spectrum, pulsatile flow, pressure, 447

G
Ganglion, stellate, innervation affecting ventricular refractory period, 416
Gas, inert, radioactive, regional cerebral blood flow in man, 237
Growth hormone, arterial collateral vessels increased after ligation of pulmonary artery, 228

H
H zone, in myocardial sarcomeres in dog and cat, 49
Hair growth, skin blood flow with Kr85 clearance, two-compartment model; histological correlation, 650
Heart
  action potentials, barium effects on embryonic and mature cells, 484
  anestheisa effects, 140
  arrhythmias
    chloroform-epinephrine induced, altered heart rate affecting bigeminy and ventricular tachycardia, 316
    respiratory center activity and, 67
  automaticity
    abolished by KCl block of subendocardial tissue, 113
    divalent metallic ions on, 484
    ATPase related to failure; ouabain and calcium, 534
  bigeminy, heart rate effects in chloroform-epinephrine arrhythmias, 316
  block or delay of premature responses in A-V node, 660
  conduction
    asystole in endocardium by KCl, 113
    barium effects on, 484
    concealed A-V conduction of premature atrial responses, 660
    in interatrial band, 502
    isoproterenol and β-blockade effects, 140
    refractoriness of ventricle during hypothermia, 323
  congenital defects induced in chick embryos by low incubator temperature, 257
  by mechanical interference, 625
  congestive failure
    myocardial ATPase, ouabain and calcium effects, 534
    by prolonged, graded norepinephrine infusions, 605
  contractility
    afterload effect on contractile element work, 729
    barium effects in cells, 484
    baroreceptors, bretylium, atropine, and vagal blockade, 101
    contraction frequency and K+ exchange, 164
    epinephrine effects on cardiac muscle contraction, 492
    KCl block of subendocardial tissues, 113
    myocardial tension and contraction velocity, 149
    and rate, related to respiratory center activity, 67
  defibrillation, optimal impulse parameters for, 10
  disease, aortic and mitral, measured by indicator dilution, 97
  electrical activation, oxygen cost of, 357
  electrocardiogram
    ischemia of myocardium, oxygen consumption, excess lactate, 178
    isoproterenol and β-blockade effects on rate, rhythm, and conduction, 140
    sympathetic innervation of ventricles affecting, 416
  failure
    acute, myocardial tension and contraction velocity, 149
    congestive, 534, 605
    hypertrophy and inhibition of protein synthesis, 558
    myocardial ATPase, ouabain and calcium effects, 534
    norepinephrine producing by prolonged infusion, 596, 605
  fibrillation
    optimal impulse parameters for defibrillation, 10
    threshold of premature beats, 18
  hypertrophy
    myocardial failure and inhibition of protein synthesis, 558
    thyroxine-induced in mice, 388
    ventricular, 634
  inotropism
    carbon dioxide and epinephrine circulatory effects, 573
    cells, barium and calcium effects, 484
    epinephrine effects on excitation-contraction coupling, 492
    vagus nerves and baroreceptor influence, 101
  interventricular septal defects in chicks incubated at low temperature, 257
  ischemia, myocardial metabolism, ECC, oxygen consumption, lactate-pyruvate ratio, hemodynamics, 178
  isoenzymes of lactic dehydrogenase released by prolonged norepinephrine infusions, 616
  isoproterenol and β-blockade effects on rate, rhythm, and conduction, 140
  membrane potentials
    A-V concealed conduction of premature responses, 660
    cyclopropane and hypoxia effects, 692
    murmurs, flow acceleration transients and pressures related to, 303
  muscle. See also Myocardium
    epinephrine, calcium, excitation-contraction coupling, 492
    mechanisms of afterloading force-velocity; contractile element work, 729
  myocardium. See Myocardium
    norepinephrine failure produced by prolonged infusion of, 596
    focal lesions and necrosis, 605
isoenzymes of lactic dehydrogenase released by infusion of, 616
output
angiotensin effects in normal and nephrectomized rats, 705
aortic and mitral regurgitation measured together by indicator dilution, 97
effects of prolonged norepinephrine infusion, 596
errors in processing dye-dilution curves, 543
transfusion and hemorrhage effects over 7 to 10 hours, 190
oxygen consumption, myocardial ischemia, ECG, excess lactate, 178
oxygen cost of electrical activation, 357
rate
carbon dioxide and epinephrine circulatory effects and, 573
chloroform-epinephrine cardiac arrhythmia affected by, 316
and contractility, related to respiratory center activity, 67
isoproterenol and β-blockade effects, 140
K⁺ exchange in myocardium, 164
transfusion and hemorrhage effects over 7 to 10 hours, 190
regurgitation, aortic and mitral, combined indicator-dilution measurements, 97
renin effects, 219
rhythm
barium effects in cells, 484
isoproterenol and β-blockade effects, 140
sarcomere structures and lengths, pressure-volume curves by electron microscopy, 49
sounds, blood flow acceleration and, 303
sympathetic innervation, distribution in ventricles, 416
tachycardia, ventricular, chloroform-epinephrine arrhythmia modified by, 316
ventricles. See Ventricle
Heart disease, aortic and mitral incompetence measured by indicator dilution, 97
Heart failure
acute, myocardial tension and contraction velocity, 149
congestive
myocardial ATPase, ouabain and calcium effects, 534
produced by prolonged, graded norepinephrine infusions, 605
hypertrophy and inhibition of protein synthesis, 558
norepinephrine producing by prolonged infusion, 596, 605
Heart muscle. See also Myocardium
epinephrine, calcium, excitation-contraction coupling, 492
mechanics of afterloading force-velocity; contractile element work, 729
Heart rate
carbon dioxide and epinephrine circulatory effects and, 573
chloroform-epinephrine cardiac arrhythmia affected by, 316
and contractility, related to respiratory center activity, 67
isoproterenol and β-blockade effects, 140

INDEX

of lumina in small arterioles during vasoconstriction, 199

Oils
atherogenic and hypercholesterolemic effects of margarine, 213
in atherogenesis, B- and L-thyroxine effects, 519

Oscillation, arterial blood pressure; frequency, damping, multiple-loop control, Mayer waves, 525

Ouabain, cardiac myofibrillar ATPase activity in congestive failure, calcium and, 534

Outflow tract, left ventricular, in experimental congenital lesions in chick embryos, 625

Oxygen
arterial muscle consumption during stretch, 79
hyperbaric oxygenation and coronary artery occlusion, 89
myocardial consumption
during electrical activation, 357
ischemia; ECG, lactate-pyruvate ratio, hemodynamics, 178
saturation during prolonged norepinephrine infusion, 596

Oxidation, hyperbaric, coronary artery occlusion and, 89

Paralysis, reflexes in allergic encephalomyelitis, 118

Perfusion, sympathetic nerve stimulation and norepinephrine compared in foreleg small vessels, 263

Peripheral circulation, cardioactive substance of plasma and, 1

Peripheral resistance
angiotensin effects in normal and nephrectomized rats, 705
norepinephrine effects by prolonged infusion, 596
segmental differences related to innervation, 429
transfusion and hemorrhage effects over 7 to 10 hours, 190

Perphenazine, sedation for ventricular volume studies in dogs, 457
pH, arterial blood, norepinephrine effects by prolonged infusion, 596

Plasma
cardioactive substance, effects on coronary and limb blood vessels, 1
cholesterol; influx of cholesterol into rabbit atheromatous aorta, 293

Potassium
atrial, sensitivity in interatrial band (Bachmann’s bundle), 502
epinephrine effects on cardiac muscle contraction, 492
intraventricular KCl, subendocardial conduction and myocardial contractility, 113
myocardial exchange related to perfusate K+, contraction frequency, and Ca++, 164

Potentials
action potentials
cardiac cells, mature and embryonic, barium ion effects on, 484
myocardial, oxygen cost of, 357
membrane potentials
arterial smooth muscle, action of constrictor and dilator substances, 641
atrioventricular concealed conduction of premature responses, 660
cardiac, cyclopropane and hypoxia effects, 692
transmembrane, cyclopropane and hypoxia effects, 692

Potentiation, contractility of myocardium after premature activations, 330
Power spectrum
pulsatile flow, pressure, 447
random signal analysis, 585

Premature activations, potentiation of myocardial contractility, 330

Premature beats, fibrillation threshold of, 18

Pressure. See also Blood pressure
filling, index of sarcomere length, 49
pulse, frequency spectrum, 447
right ventricular, coronary vascular development, 634
-volume curves
myocardial sarcomere structures and lengths, 49
in pulmonary artery, surfactant concentration and, 683
waves, frequency components of, 303

Primates, cystine deficiency, cholesterol metabolism in, 205

Pronethalol, electrophysiological effects on the heart, 140

Propranolol, electrophysiological effects on the heart, 140

Protein synthesis
cardiac, thyroxine effects on, 388
inhibition in cardiac hypertrophy and failure, 558

Pulmonary arterial stenosis, ventricular hypertrophy and coronary artery lumen area increases, 634

Pulmonary artery
ligation; surfactant concentration and pressure-volume curves, 683
stenosis; ventricular hypertrophy and coronary artery lumen area increases, 634

Pulmonary circulation
comparison of reactivity in collapsed and ventilated lungs, 366
growth hormone effects on collateral vessels, 228
hypoxia
lung circulation in, 366
membrane potentials of atrial, ventricular, and Purkinje fibers, 692
regional blood flow by scan, 550

Pulsatile flow
impedance, femoral arteries, dilatation and constriction, 126
power spectrum and pressure, 447
Purkinje fibers, membrane potentials; cyclopropane and hypoxia effects, 692
Puromycin, cardiac hypertrophy, failure, and inhibition of protein synthesis, 558
Pyruvate, myocardial ischemia, ECG, oxygen consumption, and lactate, 178

Radioactive inert gas, regional cerebral blood flow measurements in, 237
Reactivity
cardiovascular, in experimental renal hypertension, 379
of lungs to drugs and hypoxia, 366

Receptors
baroreceptors
inhibition of vasoconstrictor activity, 714
nonlinear analysis of, 673
reflexes, 585, 673, 714
spectral analysis of, 585
vagus nerves and inotropic effects on ventricles, 101
beta-receptors, cardiac; stimulation, blockade, and anesthesia, 140
Red blood cells, yield stress, fibrinogen effects, 437

R

Reflexes
baroreceptor
inhibition of vasoconstrictor activity, 714
nonlinear analysis of, 673
spectral analysis of, 585
vascular
in experimental allergic encephalomyelitis of rats, 118
peripheral inhibition of sympathetic vasoconstrictor activity, 714

Refractory period
ventricle
hypothermia effects on conduction and, 303

Renal hypertension
renin-angiotensin system and sodium depletion, 475
vascular reactivity in, 379
Renin
blood pressure in renal hypertension and sodium depletion, 475
hypertensive vascular disease, zona glomerulosa, renal renin, 219
Reserpine
carbon dioxide and epinephrine circulatory effects and, 573
thyroxine-induced cardiac hypertrophy and, 388

Resistance
energy losses in eddies, turbulence, laminar flow, 447
peripheral
angiotensin effects in normal and nephrectomized rats, 705
norepinephrine effects by prolonged infusion, 586
segmental differences related to innervation, 429
transfusion and hemorrhage effects over 7 to 10 hours, 190
vascular, distribution in small vessels of skin and muscle; sympathetic stimulation and norepinephrine compared, 263

Respiration
mechanics, surfactant effects, 683
myocardial contractility affected by, 67
oxygen consumption of arterial smooth muscle, 79
respiratory quotient of arterial smooth muscle, 79
Respiratory quotient, arterial muscle, 79

Rheology
blood and coagula during clotting, 349
blood, fibrinogen effects by addition, 437

Rhythmicity
cardiac
gastrointestinal effects in cells, 484
isoproterenol and β-blockade effects, 140

S

Sarcomeres, structures and lengths, H zones, M-L complex, sliding filament model, in cat and dog, 49
Scanning techniques, pulmonary blood flow measurements, 550
Schema, indicator-dilution measurements of variable flow tested in, 26
Sedation, perphenazine for ventricular volume studies in dogs, 457
Serotonin, vascular reactivity in experimental renal hypertension, 379
Serum cholesterol
effects of oils and margarines compared, 213
D- and L-thyroxine effects on atherosclerosis compared with, 519
Shock, hemorrhagic, metabolism and splanchnic circulation in man, 469
Sinus arrhythmia, respiratory center activity and, 67
Skin
blood flow with Kr\(^{85}\) clearance, two-compartment model; effect of hair growth and temperature, histological correlation, 650
flow and resistance, segmental effects of sympathetic stimulation and norepinephrine, 263
Smooth muscle
arterial, membrane potential of, 641
vascular electrical response to vasodilator drugs, 641
Sodium
depression; renin and blood pressure in hypertension, 475
epinephrine effects on cardiac muscle contraction, 492
Sodium nitrite, electrical and mechanical effects on vascular smooth muscle, 641
Somatic nerves
reflexes in allergic encephalomyelitis, 118
resistance changes in veins on stimulation of, 429
Sounds, cardiac, flow acceleration transients and pressure related to, 303
Species differences, cholesterol metabolism in pri-mates, 205
Spectral analysis, applied to arterial hemodynamics, 585
Spinal cord, reflexes, in experimental allergic encephalomyelitis in rats, 118
Splanchnic circulation, metabolism and hemorrhage in man, 469
Stellate ganglion, innervation affecting ventricular refractory period, 416
Stochastic analysis, regional cerebral blood flow measurements by Kr\(^{85}\) and Xe\(^{133}\), 237
Stroke volume, left ventricular, in tranquilized dogs without general anesthesia, 457
Subendocardial tissues, asystole produced by KC1 block of, 113
Surfactant, pulmonary pressure-volume curves and pulmonary artery ligation, 683
Sympathectomy, peripheral inhibition of vasoconstrictor activity revealed by, 714
Sympathetic nervous system
ECG changes induced by, 416
flow and redistribution in perfused skin and muscle, 263
peripheral inhibition of vasoconstriction, 714
resistance changes in arteries and veins on stimulation of, 429
respiratory center effects on heart rate and contractility, 67
Systole
asystole produced by KC1 block of subendocardial tissues, 113
extrasystoles, myocardial tension and contraction velocity, 149
T
Tachycardia, ventricular, chloroform-epinephrine arrhythmia modified by, 316
Temperature
congenital heart defects during incubation of chick embryos, 257
effects on testicular blood flow, 755
skin, blood flow measurements with Kr\(^{85}\) clearance, two-compartment model, 650

Zona glomerulosa, renin effects on, 219

Authors' Correction

Potassium in Dog Ventricular Muscle: Kinetic studies of distribution and effects of varying frequency of contraction and potassium concentration of perfusate.

By G. A. Langer and A. J. Brady. (Circulation Res. 18: 170, 1966.)

On page 170 the definition of $S_m$, given in connection with equation 3, is incorrect. The paragraph below equation 3 should read:

$$S_m = \text{specific activity of phase 2 portion of the muscle at start of augmented frequency period} = (1 - e^{-\lambda t_1}) (e^{-\lambda t_2}) S_o,$$

where $t_1 = \text{labeling period}$,
$t_2 = \text{washout period to start of increased frequency of contraction and } S_o = \text{specific activity of perfusate (cpm/mmolar K+).}$
