Contents

Cardiovascular effects of prostaglandin E₁ in experimental myocardial infarction. I. Hutton, J. R. Parratt, and T. D. V. Lawrie

Coronary and systemic haemodynamic effects of prostaglandins in the unaanaesthetized dog. Colin M. Bloor, Francis C. White, and Burton E. Sobel

Effect of practolol on the extent of myocardial ischaemic injury after experimental coronary occlusion and its effects on ventricular function in the normal and ischaemic heart. Peter Libby, Peter R. Mahoko, James W. Covell, Christopher I. Malloch, John Ross, Jr., and Eugene Braunwald

Autoradiographic evaluation of myocardial collateral circulation in the canine heart. Peter F. Cohn, Edward S. Kirk, James M. Downey, Edmund H. Sonnenblick, and Richard Gorlin

Myocardial ischaemia and cardiopulmonary bypass. George Benzing, James Stockert, Ed Nave, and Samuel Kaplan

Conserving effect of thyroid hormone on myocardial ATP stores in vitro. Jules Cohen, April A. Whitbeck, and Fred E. Karigh

Right and left ventricular compliance in experimental acute and subacute trypanosomal myocarditis. Dante D. Morales, Richard L. Wagner, and Walter H. Abelmann

Effects of subacute experimental trypanosomal myocarditis upon right and left ventricular pressures. Raj Kumar, Richard Wagner, and Walter H. Abelmann

Estimation of the conduction time of the baroreceptor-cardiac reflex in man. T. C. Pickering, and J. Davies

Heat clearance and heat production studies in acute experimental coronary occlusion. J. Grayson, M. Robertson, and C. Scott

Cardiospecificity of β-receptor blockade. E. M. Vaughan Williams, E. E. Bagwell, and B. N. Singh

Digitals and vagal stimulation during atrial fibrillation: effects on atrioventricular conduction and ventricular arrhythmias. Kalman Greenspan, and Thomas J. Lord

Protein synthesis in fresh aortic and pulmonary valve allografts as an additional test for viability. Nawal Al-Janabi, K. Gibson, J. Rose, and B. N. Ross

Right and left heart pressures in acute myocardial infarction. A. B. Weisse, R. Naranjo, B. Haidar, and T. J. Regan

Mechanical properties of the ascending thoracic aorta in man. E. R. Gozna, A. E. Marble, A. J. Shaw, and D. A. Winter

Myocardial contraction velocity and acceleration in man measured by ultrasound echocardiography differentiation. P.-E. Paulev, and J. F. Pedersen

Myocardial contraction velocity measured by ultrasound echocardiography-differentiation and evaluated by left ventricular pressures in pigs. P.-E. Paulev, Jan Fog Pedersen, and Flemming Neumann

Instruments and Techniques

Indirect measurement of systolic blood pressure in the lower limb using a mercury in rubber strain gauge. G. Bell, P. E. Nielsen, N. A. Larsen, and B. Wolfson

Annual Subscription (6 issues) $91.00
(Combined rate with the British Heart Journal $47.50)

All subscriptions to the United States can be ordered from the BRITISH MEDICAL JOURNAL, 1172 Commonwealth Avenue, Boston, Mass. 02134. Subscriptions for all other countries should be ordered from the Subscription Manager, B.M.A. House, Tavistock Square, London, WC1H 9JR, England.

4
An understanding of processes at the molecular level has become essential to an adequate appreciation of the function of the heart and the cardiovascular system in health and disease. Extremely important work in cardiology is being done in cellular, subcellular and molecular studies embracing biochemistry, biophysics, pathology, pharmacology and clinical cardiology. The Journal of Molecular and Cellular Cardiology spans this broad area with articles relating cellular events to heart function. It explores important new concepts and emphasizes innovative biochemical, pharmacological and morphological techniques and conclusions.
Microvascular Research, Volume 5, Number 3, May 1973

CONTENTS

Microcirculatory Research Methods
Harold Wayland, Introductory Remarks 229

Section 1. Measurement of Exchange in the Microcirculation
Paul C. Johnson, Introduction 234
Curt A. Wiedenheilm, Marion L. Shaw, Theodore H. Kehl, and James R. Fox, A Digital System for Studying Interstitial Transport of Dye Molecules 243
E. M. Rentin, Distribution of Dextran Molecules in the Intersitium in Relation to Molecular Size. Discussion to Dr. Fox's Paper "Dye Movement in Tissue Spaces" 251
W. J. Whalen, P. Nair, and R. A. Ganfield, Measurements of Oxygen Tension in Tissues With a Micro Oxygen Electrode 254
Brian R. Duling, Methods for the Measurement of Capillary Exchange 263

Section 2. Measurement of Dimensions and Geometry in the Microcirculation
Harold Wayland, Introduction 270
Sidney S. Sobin and Thomas H. Rosenquist, Determination of Dimensions and Geometry in Fixed Specimens 271
Paul C. Johnson, Photometric Scanning Techniques for Measurement of Blood Vessel Dimensions 292
Silvio Baez, A Method for In-Line Measurement of Lumen and Wall of Microscopic Vessels in Vivo 299
M. Intaglietta and W. R. Tompkins, Microvascular Measurements by Video Image Shearing and Splitting 309
Johannes a. G. Rhodin, Dimensions and Geometry of the Microcirculation: Introductory Remarks 313

Section 3. Pressure and Flow Measurements in the Microcirculation
Harold Wayland, Introduction 316
M. Intaglietta, Pressure Measurements in the Microcirculation with Active and Passive Transducers 317
James R. Fox and Curt A. Wiedenheilm, Characteristics of the Servo-Controlled Micropipet Pressure System 324
Harold Wayland, Photosensor Methods of Flow Measurement in the Microcirculation 336
Paul C. Johnson, David L. Hudnall, and Joe H. Dial, Measurement of Capillary Hematocrit by Photometric Techniques 351
M. Intaglietta, The Measurement of Pressure and Flow in the Microcirculation 357

Section 4. Techniques of Tissue Preparation
Paul C. Johnson, Introduction 362
Benjamin W. Zweifach, The Microcirculation in the Intestinal Mesentery 363
Robert W. Gore, Mucosal Preparations for Quantitative Microcirculatory Studies 368
Wallace G. Frasner, Jr., Attached Floating Cat Mesentery Preparation for Vital Microscopy 376
Silvio Baez, An Open Gremaster Muscle Preparation for the Study of Blood Vessels by in Vivo Microscopy 384
Sarah D. Gray, Rat Spinotrapezoid Muscle Preparation for Microscopic Observation of the Terminal Vascular Bed 395
K. S. Burton, Cat Sartorius Muscle: An Isolated Perfused Skeletal Muscle Preparation for Microvascular Research 401
Don D. Stromberg and Harvey M. Shapiro, Preparation of the Cat Cerebral Cortical Surface for Microvascular Pressure Measurements 410
Mary P. Wiedeman, Preparation of the Bat Wing for in Vivo Microscopy 417
Brian R. Duling, The Preparation and Use of the Hamster Cheek Pouch for Studies of the Microcirculation 423
Wallace G. Frasner, Jr., Preparation of Living Tissues for Microscopy 430

AUTHOR INDEX 437

Subject Index for Volume 5 will appear in the November 1973 issue as part of a cumulative index for the year 1973.
FREE CATALOG Describes Harvard Model 377 Pressure Transducer for direct, instantaneous measurement of either arterial or venous pressure. Simple, stable operation; pre-calibrated. Patient safety assured by isolation of fluid from current and ground. Infinite resolution, high linearity. Range: -50 to +300 mm Hg.

RECURRING BIBLIOGRAPHY OF HYPERTENSION

published by:
The American Heart Association
in cooperation with—
The National Library of Medicine

RECURRING BIBLIOGRAPHY OF HYPERTENSION is a bi-monthly published by the American Heart Association in cooperation with the National Library of Medicine and its computer-based Medical Literature Analysis and Retrieval System (MEDLARS).

This publication draws together into one convenient listing references from world literature now scattered through Index Medicus. The Bibliography provides a rapid survey of current published developments in the field of hypertension for the clinician and researcher under headings selected by Dr. J. Edwin Wood.

from 3M research

A new technique for circulation studies:

3M Brand Tracer Microspheres are small, uniformly-sized spherical particles labeled with a trace amount of a radioactive isotope. Injected into laboratory animals, the spheres make it possible to measure regional blood flow distribution without disturbing natural flow or moving individual organs. 3M Tracer Microspheres labeled with a choice of four different isotopes, including both GAMMA and BETA emitters, are readily available. All have a shelf life that enables experiments to be completed without significant loss in isotope activity. For detailed information about 3M Tracer Microspheres, and a bibliography of the current literature concerning their use, arranged by body organ, just complete and mail us the form.

Mail to: 3M Nuclear Products
3M Company, 3M Center
Saint Paul, Minn. 55101

Please send me further information on 3M Brand Tracer Microspheres.
