Measure regional myocardial functions

- Myocardial segment length and wall thickness
- Ischemia
- Hypertrophy
- Ventricular internal diameter
- Regional wall stress
- Blood vessel diameter
- Organ diameter
- Skeletal muscle mechanics

Now, after years of research and successful testing, the most advanced system for chronic measurement of cardiac blood vessel and organ dimensions is available. The Model 401 Four Channel Ultrasonic Dimension System measures four muscle dimensions simultaneously. Results are then conveniently calibrated in your choice of microsecond or millimeter and visible on an LED display. The portable, multipurpose system is adaptable to your existing lab equipment. Schuessler and Associates is available for consultation on initial installation and on expanded and experimental usage of the Four Channel Ultrasonic Dimension System. For additional information and prices, contact Schuessler and Associates

SUBSCRIPTION AND ADVERTISING CORRESPONDENCE: Write to Publishing Director, American Heart Association, 7320 Greenville Avenue, Dallas, Texas 75231. To change address, send subscriber’s old and new addresses and subscription number at least 30 days in advance.

SUBSCRIPTION RATES: For all journals, send check, draft, post-office or express money order to American Heart Association, 7320 Greenville Avenue, Dallas, Texas 75231. Subscriptions accepted for calendar or fiscal year. Annual rate includes supplements; supplements alone are priced separately.

Circulation Research: $50 per year. United States ($25.00 for Research Fellows, Interns, Residents, and Medical Students in United States*); $55 per year elsewhere, including postage. Single copies, $5.00.

Circulation: $25 per year. United States ($12.50 for Interns, Residents, and Medical Students in United States*); $30 per year elsewhere, including postage. Single copies, $3.50.

Stroke: A Journal of Cerebral Circulation: $25 per year. United States ($12.50 for Interns and Residents in United States*); $30 per year elsewhere, including postage. Single copies, $5.00.

* For special rate, send letter stating post held.

ADVERTISING SPACE is granted only to copy passed upon by a special committee of the American Heart Association. Advertising forms close 30 days prior to the first day of publication month. Advertising rates and page sizes are available on application to the Publishing Director.

Instructions to Authors

Information about manuscripts suitable for Circulation Research, including format, submission, review, and editing will appear in the first number of each volume (January and July).

Authors will be assessed charges of $25 per printed page for papers published in Circulation Research. The ability to pay page charges is in no way related to the consideration of a manuscript for publication.

The author bears the cost of color in illustrations, as well as the cost of any reprints he may order.
SYMPOSIUM ON FDA REGULATION
of MEDICAL DEVICES

College of Physicians and Surgeons
of Columbia University
New York, New York
April 7-8, 1978
Friday–Saturday

General Information
The Medical Device Amendments of 1976 (Public Law 94-295) placed the entire spectrum of medical devices — from band aids to complex implanted artificial organs — under the jurisdiction of the FDA.

Major new regulatory proposals expected from the FDA in 1978 include “Investigational Device Exemptions” (replacing Aug. 20, 1976) plus agency-wide documents on “Investigators” and Institutional Review Boards. These supplement recent proposals regulating Intraocular Lenses, Good Manufacturing Practices, Good Laboratory Practices and Sponsors and Monitors, among others.

The symposium covers effects on private practitioners, researchers, manufacturers, administrators, local Institutional Review Boards, and lawyers among others. Registration fees include all relevant reprints from the Federal Register, as part of an extensive special syllabus.

Tuition Fee — Preregistration Required
Enrollment is limited. The $200 fee ($75 for students) is payable when submitting application.

Accreditation
14 credit hours in Category 1 —AMA Award

Possibilities, limitations, and technique for the study of regional myocardial perfusion in man by Xenon-133 A. MASERI, A. L'ABBATE, C. MICHELASSI, A. PESOLA, P. PISANI, M. MARZILLI, M. DE NES, AND P. MANCINI

Effect of regional myocardial ischaemia on left ventricular isovolumic contraction. A. V. N. GOODYER, B. Y. WONG, AND R. LANGOU

Cardiac function, coronary flow and MVO₂ in hypertrophy induced by pressure and volume overloading A. B. MALIK AND A. S. GEHA

Cardiovascular and antiarrhythmic effects of aprindine (AC 1802) during partial occlusion of a coronary artery in the pig P. D. VERDOUW, W. J. REMME, AND P. G. HUGENHOLTZ

Effect of direct current countershock on atrial and ventricular electrophysiological properties and myocardial potassium efflux in the thoracotomised dog M. F. ARNSDORF, D. A. ROTHBAUM, AND R. W. CHILDERS

Analysis of the interpolation phenomenon in man evaluated by premature atrial stimulation G. MASINI AND R. DIANDA

β-adrenoceptor antagonists and the release of creatine phosphokinase from hypoxic heart muscle W. G. NAYLER, A. GRAU, AND C. YEPEZ

Calcium kinetics in the aorta of spontaneously hypertensive rats T. T. ZSOTÉR, C. WOLCHINSKY, N. F. HENEIN, AND L. C. HO

Collagen metabolism in experimental cardiac hypertrophy in the rat and the effect of digoxin treatment H. HURKO

Right and left ventricular compliance in the hereditary cardiomyopathy of the Syrian hamster A. MASS-SCHWARTZ, R. S. WEINSTOCK, R. L. WAGNER, AND WALTER H. ABELMANN

Annual Subscription (monthly from 1978), $60.00
(Combined Subscription with British Heart Journal, $108.00)
