SONOMICROMETER

**Measure Myocardial Function and Organ Dimensions:**
- Variable RF Gain
- Broadband Radial Mode Suppression
- 3 MHz Bandwidth
- Balanced Pinger Drive
- Variable D.C. Output
- 4-Pole Active Data Filter
- Quartz Crystal Calibration

**Additional Features:**
- 3-Digit Calibration Display
- Electrograms from the Transducers
- EM Flowmeter Synchronization

For information on the Model 120 Sonomicrometer contact:

Circulation Research
An Official Journal of the American Heart Association

Circulation Research provides a medium for bringing together basic research on the cardiovascular system from various disciplines including biology, biochemistry, biophysics, morphology, pathology, physiology, and pharmacology. The Journal also will accept for publication manuscripts on clinical research that contribute to an understanding of fundamental problems.

Brief Reviews From Circulation Research 1981

Editors: Brian F. Hoffman, M.D.
         Francois M. Abboud, M.D.

Brief Reviews contains articles published in CIRCULATION RESEARCH during 1981, with topics of particular interest to all those concerned with the Cardiovascular field. The presentations are designed to make the material comprehensible to the general reader. Each review emphasizes advances in a particular field, unsolved problems and directions for future research.

AHA Monograph No. 88
Preprinted from CIRCULATION RESEARCH 1981
157 Pages Price: $8.00

The instrument pictured on this page does something no other instrument has ever been able to do. It measures capillary blood flow in skin or other exposed tissue. What's more, it does it instantly and continuously. Without using invasive techniques.

The instrument is the MEDPACIFIC LD 5000 Capillary Perfusion Monitor. It was developed by leading scientists at the National Institutes of Health and the University of Washington using recent innovations in laser doppler technology. It literally "sees" the movement of red blood cells in superficial tissue.

The traces shown here illustrate its extreme sensitivity. It measures even the smallest changes occurring in a fraction of a second.

As a result, it can record not only individual cardiac pulsations, but also capillary flow waveforms, including the dicrotic notch.

Most important, the LD 5000 is safe for all tissues, excepting the eye. So you can monitor continuously. Without alteration of the test site.

If you're concerned about blood flow—in the vascular lab, after surgery, in drug applications or research—you should know more about the MEDPACIFIC LD 5000. For information, call or write:

MEDPACIFIC CORPORATION
6701 SIXTH AVENUE SOUTH, SUITE 127
SEATTLE, WA 98108-(206) 763-9177
SUBSIDIARY OF NUCLEAR PACIFIC, INC.

FOR THE FIRST TIME YOU CAN MEASURE BLOOD FLOW THAT'S ONLY SKIN DEEP.
Measure regional myocardial functions

- Organ diameter
- Ventricular internal diameter
- Myocardial segment length and wall thickness
- Ischemia
- Hypertrophy
- Regional wall stress
- Blood vessel diameter
- Skeletal muscle mechanics

Now, after years of research and successful testing, the most advanced system for chronic measurement of cardiac blood vessel and organ dimension is available.

The Model 401 Four Channel Ultrasonic Dimension System measures four muscle dimensions simultaneously. Results are then conveniently calibrated in millimeters and visible on an LED display. The portable, multipurpose system is adaptable to your existing lab equipment.

NOW AVAILABLE IN 1, 2, 3 & 4 CHANNELS!
