Expedited Publications

Phospholamban Ablation and Cardiac Contractility • PDGF-A and Cell Proliferation in Human Atherosclerosis

Original Contributions

Myosin Synthesis in Pressure Versus Volume Overload • Apoptosis and Fas Antigen in Cardiomyocytes • Ca²⁺ Cycling and Myocardial Function • Na⁺-Ca²⁺ Exchanger Expression in Failing Human Heart • Decrease in Lung Angiotensin-Converting Enzyme in Heart Failure • Sarcomere Mechanics in Myocarditis • Iₖ in Subepicardium and Subendocardium • Selective Permeability of Cx45 Channels • Voltage-Independent Effect of K⁺ on Na⁺ Current Vₘₐₓ • Calcium Channel Developmental Expression • β-Adrenergic Modulation of Conduction in Purkinje Fibers • Capillary Arterialization From Terminal Arterioles • I₆ in Endothelial Cells • Matrix Metalloproteinases in Rat Arteries • Complement-Activating Cardiolipin-Protein Complexes • Coronary Microvascular Control by G Protein • Adrenergic Modulation of the Exercise Pressor Reflex • Cardioprotection by α₁-Adrenergic Stimulation

Brief Definitive Communication

Ischemic Preconditioning and Protein Kinase C

Rapid Communications

Anisotropic Conduction in Cell Culture • Cyclic ADP-Ribose and the Cardiac Ryanodine Receptor
A dedicated computer system specifically designed for the researcher investigating hemodynamic and/or cardiovascular mechanics in experimental preparations. CORDAT II in conjunction with Triton Technology's SYSTEM 6, enables simultaneous acquisition and analysis of the following physiological signals:

- Left and Right Ventricular Pressures and Volumes
- Sonomicrometer Segmental Length
- Myocardial Wall Thickness
- Pressure and Blood Flow
- Coronary Blood Flow
- Electocardiogram

Analysis is performed on a beat-to-beat resolution. The entire experiment record is stored on optical media for permanent storage. Hard-copy loops, signals, and results are obtained in real-time using laser printer technology.

**Pressure-Volume Loop**
Instantaneous P-V Loop computed from your equation for volume (either from LA-AP-SL crystals or Impedance Catheters).

**Pressure-Wall Thickness**
Side-by-side comparisons of ischemic and non-ischemic region of myocardial wall thickness with beat-to-beat computation of stroke work.

**Trend Graph**
Cumulative real-time response graph of any calculated parameters. Data collected at any point during the experiment can be retrieved and graphed with current results.

**Regression Analysis**
CORDAT II features real-time linear and exponential regressions of key points in the cardiac cycle, such as Emax, ED, ES, SW. During a series of load changes the effectiveness of your load change, sensor location, and signal quality is verified. CORDAT II will give you a visual and hard-copy of loops and regression values. Retrospective editing of loops is also available.

**Flexibility**
CORDAT II frees you from both hardware and software dependence. CORDAT II allows YOU to add new functions and calculations.

To learn more about how you can utilize this powerful tool in your laboratory, please contact us.

Circulation Research provides a medium for bringing together basic research on the cardiovascular system from various disciplines including biology, biochemistry, biophysics, cellular biology, molecular biology, morphology, pathology, physiology, and pharmacology. The journal also accepts for publication manuscripts on clinical research that contribute to an understanding of fundamental problems.

Circulation Research
An Official Journal of the American Heart Association

Editorial Correspondence

Editorial correspondence should be addressed to Stephen F. Valter, MD, Circulation Research Editor, Harvard Medical School, New England Regional Primate Research Center, One Pine Hill Drive, PO Box 9102, Southborough, MA 01772-9102. Telephone (508) 624-0014. Fax (508) 624-0860.

Instructions to Authors appear twice a year, in the January and July issues. Authors should consult these instructions before submitting manuscripts to Circulation Research.

Author Costs include page charges, cost of color figures, and cost of offprints, if ordered.

Statements, opinions and results of studies published in Circulation Research are those of the authors and do not reflect the policy or position of the American Heart Association, and the American Heart Association provides no warranty as to their accuracy or reliability.

Business Correspondence

Business correspondence should be addressed to Scientific Publishing, American Heart Association, 7272 Greenville Avenue, Dallas, TX 75231-4596. Telephone (214) 706-1310. Fax (214) 691-6342.

Change of Address: Please supply old and new addresses. Allow 4 weeks for changes.

Subscription Rates: In the United States, individuals may subscribe to Circulation Research for their personal use at the annual rates of $138 for members of an American Heart Association scientific council and $172 for nonmembers. Outside the United States, add $84 for postage.

Medical professionals and scientists in training may subscribe for $56 in the United States and $128 outside the United States if payment is accompanied by a letter from the department chairman verifying post held and completion date.

Prepayment is required. Make checks, draft, or money order payable to the American Heart Association in US dollars drawn on a US bank, with Circulation Research on the face of the check. To charge on Visa or MasterCard, include account number, expiration date, and name as it appears on card.

Contact AHA for single copy rates and subscription rates for libraries, reading rooms, and other multiple-use institutions.

For institutional rates in Japan, contact Nankodo Co., Ltd., 42-6 Hongo 3-chome, Bunkyo-ku, Tokyo 113, Japan. Telephone 03 (3811) 9950. Fax 03 (3811) 5031.

Offprints: For orders of fewer than 100, offprints are available from corresponding authors. For orders of 100 or more, contact Scientific Publishing, Reprint Specialist. Telephone (214) 706-1466.

Advertising Correspondence

Advertising Sales: The Jackson-Gaeta Group, Inc., 3 Prospect Street, MORristown, NJ 07960. Telephone (201) 538-0839. Fax (201) 538-1075. Contact Joe Jackson, Tony Gaeta, or Steve Maiorano.

Advertising Production: American Heart Association, Circulation Research Advertising, 7272 Greenville Avenue, Dallas, TX 75231-4596. Telephone (214) 706-1426. Fax (214) 691-6342. Advertising forms close 45 days before the first day of publication month.

Advertisements in this issue have been reviewed to comply with the principles governing advertising in American Heart Association publications. A copy of these principles is available on request. The appearance of an advertisement in an AHA publication is neither an AHA guarantee nor endorsement of the product or service or the claims for the product or service made by the advertiser.

Secondary Services

Indexed or Abstracted in Biological Abstracts, Chemical Abstracts, CIS Abstracts, Energy Research Abstracts, Excerpta Medica, Index Medicus, International Aerospace Abstracts, Life Sciences Collection, PESTDOC, PREV, RINGDOC, and VETDOC.

Microform Edition available from University Microfilms International, 300 North Zeeb Road, Ann Arbor, MI 48106-1346, telephone (313) 761-4700, and Princetion Microfilm Corporation, Alexander Road, Box 2073, Princeton, NJ 08540, telephone (609) 452-2066.

Authorization to photocopy items from this publication for personal and internal use, the personal or internal use of specific clients, or for educational use, is granted by the American Heart Association on the condition that the copier pay the appropriate fee to the Copyright Clearance Center, Inc. (CCC), 222 Rosewood Drive, Danvers, MA 01923. Telephone (508) 750-8400. Fax (508) 750-4744. This consent does not extend to copying for advertising or promotional purposes, for creating new collective works, or for resale. Individuals may make single photocopies for personal, noncommercial use without obtaining permission. For all other use, permission should be sought directly from the American Heart Association. Telephone (214) 706-1309.

Circulation Research (ISSN 0009-7330) is published monthly by the American Heart Association, 7272 Greenville Avenue, Dallas, TX 75231-4596.

We've put another quality recorder into circulation.

When it comes to the full spectrum of medical research recording needs, Gould's always thinking. And responding. Consider our latest: a compact, economical alternative to traditional recorders — the TA11. Use this 4- to 16-channel recorder with existing medical research signal conditioners from Gould. Or complete the benchtop system with our 6600 Series, including the new, low-cost ECG/Biotach signal conditioner and 8-channel case.

With its integral LCD monitor, this thermal-array recorder minimizes paper waste by letting you set up and calibrate signals without running the chart. And because the monitor is real-time, it can scroll slow signals as they occur — eliminating the delay between an event and viewing that event on paper, which is inherent in thermal array recording.

Display your signals on the chart and you have the advantage of the TA11's unique 11" wide fan-fold paper, which enables you to record 4 channels, each 50mm wide, or 6 channels, 40mm wide, plus many other pre-defined grid formats.

A push-button panel makes basic recording functions effortless. For more advanced features, the TA11 provides straightforward operation with proven touchscreen technology on the monitor.

An 8-channel TA11 is priced as low as $9,995. Add Gould's 6600 Series external bio-physical signal conditioners and rugged, low-profile case for a complete, 8-channel system under $20,000.

The TA11. Further proof that Gould does its research to continue bringing you value and performance in medical research-specific recording. Call (216) 328-7000 today for details on the TA11 and the advantages of thermal array recording, or for immediate response, photocopy and complete the FAST ACTION FAX, and send it today.

FAST ACTION FAX (216) 328-7400

Yes! ☐ Have a Gould Sales Representative call me to arrange a demonstration.
☐ Push me a free TA11 brochure.
☐ I'm interested in the new 6600 Series ECG/Biotach Signal Conditioner.
☐ I'm interested in Gould's convenient rent-to-own plan.

To Get Ahead
You’ve Got To
Pay Your
Dues.

More than 26,000 medical researchers and physicians are members of one or more of the AHA's 14 scientific councils. By joining a scientific council, you can broaden your knowledge and increase your expertise, widen your network of colleagues...and make a real impact in your chosen field.

In addition, members of the AHA's scientific councils are eligible for these benefits:

- A reduced registration fee for the annual AHA Scientific Sessions and other council-sponsored meetings.
- A 20 percent discount on subscriptions to AHA scientific journals.
- A newsletter with updates on council activities and issues of interest to members.

The AHA's 14 scientific councils are:
